

Tianyun Yang

Game UI/UX Designer

yangtianyun7@foxmail.com

● Education	
Uppsala University (Sweden) MA in Game Design Progrmmme	2025 - 2026
Limkokwing University (Malaysia) (Hon) BA in Game Art and Development	2016 - 2019
● Skills	
Design tool Figma; Adobe XD; Photoshop; Illustrator;	
Game Engine Unity (UGUI); Godot 4	
Professional Skills Game UI / UX design / 2d digital art / 3d modeling	
Language • Mandarin - Native English - Proficiency	
● Work Experience	
Co Founder & Game UI/UX Artist Mysterious Figurine Studio	2024.3 – now
- Founded an independent visual design studio providing premium UX/UI and graphic design services for domestic and international video games and tabletop RPGs (TRPGs). - Handled the entire project lifecycle, including business development, requirement analysis, and end-to-end visual delivery.	
Key Projects	
Project: Soul Hunter TTRPG (Core Rulebook & Expansions)	
- Information Architecture & UX Redesign: Led the complete visual and interactive system redesign for a flagship Chinese-fantasy TTRPG, focusing on the core character sheets. - Usability & Iterative Design: Gathered user feedback from active playtest sessions to identify cognitive overload in the legacy layout. Redesigned information hierarchies for core sections (Attributes, Skills, and Psionics), optimizing whitespace and visual flow to significantly accelerate in-game data retrieval and character sheet updating. - Visual Style Guide & Marketing Collateral: Developed the game’s signature Chinese-fantasy art style guide, establishing custom typography, grid systems, and color palettes. Created full-suite marketing assets (crowdfunding pages, banners, flyers) that supported a campaign generating over ¥800k in funding and million-level exposure.	
Project: Unannounced Premium Single-Player Title US-Based Game Studio	
Cross-Border Collaboration & Asset Delivery: Functioned as an independent contractor collaborating remotely with a US-based development team to design and deliver high-quality, stylized in-game UI icon assets.	

- Qualitative User Research & UX Auditing: Conducted target audience research utilizing participant observation and semi-structured interviews with core community players and KOLs across major platforms (Bilibili, Baidu Tieba).
- Delivered comprehensive localization UX audit reports that successfully identified friction points and optimized the onboarding funnel for new players.
- Cross-Border Usability Issue Resolution: Audited and triaged localized usability bugs. Handled ongoing communication in English with the overseas development team during regular syncs, facilitating the prioritization and implementation of critical UX fixes that significantly enhanced the multiplayer experience for Chinese-speaking users.
- 0-to-1 Community & Social Strategy: Built and launched the game’s official social media matrix from scratch, growing the Bilibili channel to over 20,000 followers in six months. Transformed disparate player hubs into an integrated community, establishing a direct feedback loop between players and developers to drive iterative product updates.
- Growth & Marketing Impact: Designed and executed localized content distribution strategies across multiple platforms, generating millions of impressions and driving a 17% increase in Steam sales in the China region within six months.

- System & Feature Design: Designed high-quality, high-fidelity UI interfaces and assets for core game systems, including the Monthly Card (monetization) and Guild Leaderboards (social).
- UGUI Implementation & Quality Assurance: Integrated and assembled UI layouts directly inside Unity using UGUI, ensuring pixel-perfect translation from static design mockups to interactive in-game assets.
- Multi-Platform Adaptation: Collaborated closely with client programmers to implement responsive layouts, ensuring seamless UI/UX scaling and visual consistency across various mobile device resolutions and aspect ratios.
- Localization QA & Troubleshooting: Proactively identified and resolved UI issues related to localized text expansion, font rendering, and dynamic layout scaling across multi-language versions.

Project: Undying (Shipped) | Premium Survival RPG with Resource Management

- Core System UX/UI Design & Usability Iteration: Served as the lead UX/UI designer, driving the interaction design for core systems including inventory management, character progression, and world map navigation. Iterated key interfaces based on playtest feedback and gameplay balance adjustments to reduce cognitive load.
- Information Architecture & Flow Mapping: Analyzed complex design specifications to build intuitive user flows and information architectures, translating abstract game mechanics into clear, actionable layouts.
- 0-to-1 Design System & Art Direction: Established the game's comprehensive UI style guide and design system from scratch, defining the visual identity, typography, iconography, and responsive grid layouts.
- Figma-to-Unity End-to-End Delivery: Created high-fidelity interactive prototypes in Figma and personally implemented the assets within Unity, ensuring pixel-perfect fidelity and smooth transition animations.
